

REMARKS

The present application is a continuation-in-part of commonly assigned U.S. Patent Application Serial Number 09/088,652, filed June 1, 1998. The drawings as filed contain duplicate FIGS. 30, 32 and 33 as a result of a mistake on the part of the draftsman. In addition, incorrect drawings for FIGS. 29 and 31 were filed. Since there is now one less sheet of drawings, totaling 29 sheets instead of 30 sheets, Applicant hereby submits a complete set of drawings including replacement sheets for FIGS. 29 and 31, as set forth below.

As set forth above, this application is a continuation-in-part of U.S. Patent Application Serial Number 09/088,652, filed June 1, 1998. U.S. Patent Application Serial Number 09/088,652 included FIGS. 1-39, including FIGS. 29 and 31 as submitted herewith as replacement sheets 16 and 18.

As described in the Brief Description of the Drawings on page 4, and in the Detailed Description on pages 16-18, the attached FIGS. 29 and 31 (new sheets 16 and 18 of 29, respectively) should have been filed instead of FIGS. 29 and 31 (as set forth on sheets 16 and 19 of 30). As filed, FIG. 29 (sheet 16 of 30) shows a perspective of a disk printer and a disk dispenser. Meanwhile, FIG. 29 (new sheet 16 of 29) as set forth in the Brief Description of Drawings is a partially cutaway perspective view of disk duplication system having multiple recorders in accordance with the present invention. In addition, in the Detailed Description, on a page 16, FIG. 29 is described as a "disk handling system, generally designated with the reference numeral 300. The disk handling system includes a turntable 36 and multiple disk recorders 212." FIG. 29 (sheet 16 of 30) as filed, however, does not include references numerals 36 (turntable) nor 212 (multiple disk recorders).

Accordingly, the Brief Description of Drawings and Detailed Description supports replacement of FIG. 29 (new sheet 16 of 29). No new matter has been added.

FIGS. 31-33 (sheet 19 of 30) as filed, are views of the assembly of FIG. 30 (sheet 18 of 30) as seen along the line 31-31. FIG. 31 (new sheet 18 of 29) as described in the Brief Description of Drawings is a perspective view of the turntable and multiple recorders stacked and aligned in a radial array. In the Detail Description, on page 16, FIG. 31 is described as "a variation of the invention, wherein the elevator pin 98 defines a central axis 301, the disk recorders 212 stack in a radial array with respect to the central axis 301." As filed, FIG 31 (sheet 19 of 30) does not include the elevator pin 98, central axis 301, nor disk recorders 212 as described in the detailed description. Thus, the Brief Description of Drawings and the Detailed Description supports replacement of FIG. 31 (new sheet 18 of 29). No new matter has been added.

Accordingly, Applicant respectfully submits a complete set of drawings including the attached FIGS. 29 (new sheet 16 of 29) and 31 (new sheet 18 of 29) which were inadvertently not filed. No new matter is being added as a result of the replacement of FIGS. 29 and 31 since the present application is a continuation-in-part of commonly assigned U.S. Patent Application Serial Number 09/088,652, filed June 1, 1998, and for the reasons discussed above.

Respectfully submitted,

BURNS, DOANE, SWECKER & MATHIS, L.L.P.
